Strategic Blueprint: Scaling Sevlex to $100k MRR via Productized Cybersecurity Services

1. The Strategic Imperative: Productization as the Path to Scale

1.1 The Service Paradox in Cybersecurity

The cybersecurity industry stands at a critical inflection point where the traditional models of service delivery are increasingly failing to meet the velocity and scalability requirements of the modern market. Historically, cybersecurity firms have operated as pure consultancies, trading high-expertise hours for fees. This "time-for-money" model, while capable of generating initial cash flow, creates an inherent ceiling on growth. Revenue becomes linearly tethered to human capital; to increase revenue, the firm must linearly increase headcount, which introduces management complexity, erodes margins, and creates quality control challenges.[1]

For Sevlex to transcend the typical boutique agency plateau and achieve a consistent $100,000 in monthly recurring revenue (MRR), the fundamental business architecture must shift from bespoke consulting to **productized services**. A productized service standardizes the scope, price, and delivery mechanism of a professional service, effectively treating it as a tangible product that can be sold, delivered, and scaled with predictable unit economics.[3] This shift is not merely operational but psychological; it requires moving from being a "fixer" of random problems to a "provider" of specific, guaranteed outcomes.

The market data supports this transition strongly. Security budgets are expanding, yet buyers—specifically in the SaaS and SMB sectors—are increasingly resistant to open-ended hourly engagements which carry high risk of scope creep and budget overruns.[5] These buyers seek simplicity, transparency, and defined outcomes. By packaging complex, high-friction processes like SOC 2 compliance or vCISO advisory into fixed-price, fixed-scope offerings, Sevlex aligns its operational incentives with the client's desire for certainty. The goal is to build a "Service Factory" where inputs (client data and infrastructure) are processed through a standardized engine to produce consistent high-value outputs (compliance, security posture, and trust).[2]

1.2 The Hickman Productization Framework Applied to Cyber

Leveraging the insights from the "How I Productized My Service" methodology, Sevlex will adopt a structured 10-step evolution. The core premise is that scalability requires constraint. By artificially constraining the "who" (Avatar) and the "what" (Result), Sevlex can uncap the

"how much" (Revenue).

The foundational concept is the "Signature Framework." In the context of Sevlex, this means moving away from "we do cybersecurity" to "we take SaaS companies from zero to Audit-Ready in 8 weeks." This framework makes the invisible service visible. It turns an abstract concept like "risk management" into a tangible roadmap with phases, milestones, and deliverables that a client can visualize and purchase.[6]

The "Gather, Assemble, Launch" framework referenced in the strategy visuals serves as the perfect chassis for a cybersecurity engagement.

- **Gather:** The assessment and intake phase where assets are inventoried and gaps identified.
- **Assemble:** The remediation phase where policies are written, controls are implemented, and tools are configured.
- **Launch:** The audit or "go-live" phase where the compliance report is issued or the security program becomes operational [Image 4].

By adhering to this structure, Sevlex decouples the founder's time from the delivery. If the process is defined, it can be taught. If it can be taught, it can be delegated. This is the only mathematical path to $100k/month without founder burnout.

1.3 Financial Modeling: The Road to $100k MRR

Reaching $100,000 per month requires a precise mix of recurring revenue and high-yield project work. Relying solely on low-ticket subscriptions requires too much volume, while relying solely on high-ticket projects creates "feast or famine" cash flow cycles. The optimal strategy for Sevlex is a "Barbell Approach" balancing high-volume recurring retainers with high-margin implementation accelerators.

The financial model relies on three core revenue engines:

1. **The Compliance Accelerator (Cash Flow Engine):** High-ticket, short-duration projects (e.g., SOC 2 Readiness) that bring large cash infusions.
2. **The vCISO Retainer (Stability Engine):** Recurring monthly subscriptions that provide baseline operating capital and increase Customer Lifetime Value (LTV).
3. **The Penetration Testing Suite (Expansion Engine):** Transactional upsells that maximize share of wallet from existing clients.[1]

Table 1.1: Revenue Composition Strategy for $100k/Month Target

Revenue Engine	Product	Price Point	Volume Needed	Monthly Revenue	Role in Strategy

Recurring (MRR)	**vCISO Silver**	$3,500 / mo	10 Clients	$35,000	Baseline OPEX coverage. High-margin automated reporting.
Recurring (MRR)	**vCISO Gold**	$6,500 / mo	4 Clients	$26,000	Strategic advisory layer. Higher touch, higher retention.
Recurring (MRR)	**vCISO Platinum**	$12,000 / mo	1 Client	$12,000	Enterprise anchor client. Provides social proof and prestige.
One-Time (NRE)	**SOC 2 Bootcamp**	$15,000 / project	1 Client	$15,000	"Wedge" product to acquire new logos. Feeds into vCISO.
One-Time (NRE)	**Pentest Packages**	$4,000 avg	3 Tests	$12,000	Upsells to existing base or "foot in the door" for new leads.
Total			**~19 Clients**	**$100,000**	**Balanced Portfolio**

This model demonstrates that Sevlex does not need hundreds of clients. It needs approximately 20 high-quality relationships. This clarity shifts the focus from "mass marketing" to "Account-Based Marketing" (ABM) and high-touch sales, which aligns with the high-trust nature of cybersecurity.[6]

---

2. Defining the Avatar and the Result

2.1 The Specialist Dilemma: Choosing the "Who"

The first step in the productization blueprint is to "Pick your best-fit client" [Image 2]. A fatal error for many agencies is generalism. "Cybersecurity for Small Businesses" is too broad; it forces the agency to reinvent the wheel for a dentist one day and a manufacturing plant the next. To scale, Sevlex must choose a vertical where the pain is acute, the budget is available, and the technical environment is uniform.[5]

The Ideal Avatar: The B2B SaaS Founder/CTO (Series A/B)
The analysis points to B2B SaaS companies as the optimal target for three reasons:

1. **Uniformity:** They almost all run on AWS/GCP, use GitHub, use Slack, and have remote workforces. This allows for massive standardization of the vCISO service (e.g., one set of policies works for 90% of clients).[9]
2. **Existential Pain:** They *cannot* sell up-market to enterprise customers without SOC 2 or ISO 27001 compliance. Security is a revenue blocker. This makes the sale "essential" rather than "discretionary".[10]
3. **Budget Velocity:** They are often VC-backed and accustomed to spending on growth enablement. They value speed over cost savings.[12]

The Avatar Statement:
"I help achieve so they can." [Image 1].

2.2 The "Result" They Really Want

It is crucial to distinguish between what Sevlex *sells* and what the client *buys*. Sevlex sells risk assessments, vulnerability scans, and policy documents. The client buys *Audit Readiness*, *Sales Velocity*, and *Peace of Mind* [Image 2].

The marketing narrative must pivot from "We prevent hackers" (which is abstract and insurance-like) to "We unblock revenue" (which is tangible and investment-like). When a SaaS founder hears "SOC 2," they don't think about "firewall configurations"; they think about "closing the $100k deal with Coca-Cola that is stuck in procurement." Sevlex positions itself as the bridge between their current state and that closed deal.[11]

2.3 Market Segmentation and Pricing Psychology

To reach the $100k/month goal, Sevlex must tier its offering to capture different segments of the market without creating custom proposals for each. This aligns with the "Goldilocks" pricing strategy—offering Good, Better, and Best options to anchor the buyer and guide them to the middle tier.[6]

- **Segment A (The "Bootstrapper"):** Pre-revenue or early seed. Needs the *badge* of security (SOC 2) to get the first deal. Highly price-sensitive. Best fit for the "Group Coaching" or "Bootcamp" model.
- **Segment B (The "Scaler"):** Series A/B. Has a sales team. Security questionnaires are piling up. Needs a vCISO to handle the volume and provide confidence to investors. Best fit for the "Gold" vCISO retainer.
- **Segment C (The "Enterprise"):** Regulated industries (FinTech, HealthTech). High compliance burden (HIPAA + SOC 2). Needs a strategic partner to sit in board meetings. Best fit for "Platinum" services.[13]

---

3. The Signature Framework: The Sevlex "SecureScale" System

3.1 Naming the Framework

As per Greg Hickman's guidance, productization requires a "Signature Framework"—a named methodology that explains "how we work" in a way that builds intellectual property value. We will name the Sevlex process the **"SecureScale Framework."** This name implicitly promises that security will not slow the company down (a common fear) but will enable scaling.

3.2 Phase 1: The "Gather" Phase (Weeks 1-2)

This phase corresponds to the initial assessment and discovery. It is standardized to prevent the "what are we doing?" confusion that plagues consulting projects.

- **Step 1: Asset & Risk Inventory:** Using automated connectors (Vanta/Drata agents), Sevlex maps the client's entire digital footprint (endpoints, cloud instances, code repositories).[15]
- **Step 2: The Gap Analysis:** A formal audit against the target framework (SOC 2, ISO 27001, or NIST CSF). This produces a "Red/Yellow/Green" scorecard.
- **Step 3: The Roadmap Presentation:** A fixed-format presentation where Sevlex presents the "remediation path"—the exact steps needed to reach the target state. This establishes immediate authority and clarity.[16]

3.3 Phase 2: The "Assemble" Phase (Weeks 3-6)

This is the heavy lifting phase, but it is "assembled" rather than "created" because Sevlex uses pre-built templates for 80% of the work.

- **Step 1: Policy Deployment:** Rolling out the "Sevlex Standard Policy Pack"—a set of 15 pre-written, auditor-approved policies (Access Control, Incident Response, etc.) customized only in key variable fields.[17]
- **Step 2: Technical Controls Implementation:** Configuring the "hard" security—MFA enforcement, MDM rollout, Endpoint Detection & Response (EDR) installation, and Cloud Security Posture Management (CSPM).[19]
- **Step 3: Process Integration:** embedding security into the client's existing workflows. For example, setting up a "New Hire" Zapier automation that triggers IT onboarding tasks, or integrating vulnerability scanning into the engineering team's Jira board.[3]

3.4 Phase 3: The "Launch" Phase (Weeks 7-8)

The final phase turns the security program from a project into an operational reality.

- **Step 1: The Tabletop Exercise:** A 2-hour simulated breach workshop with the client's leadership team to test the Incident Response Plan. This is a high-value "experience" that clients love.[20]
- **Step 2: The Pre-Audit Assessment:** A mock audit run by Sevlex to ensure 100% readiness before the external auditor arrives.
- **Step 3: Go-Live / Audit:** The handoff to the external CPA firm for SOC 2, or the "Graduation" to the ongoing vCISO maintenance mode [Image 4].

Table 3.1: The SecureScale Framework Visualized

Phase	Gather (Assess)	Assemble (Remediate)	Launch (Maintain)
Focus	Visibility & Gaps	Implementation & Engineering	Validation & Operations
Deliverable 1	Asset Inventory Map	15-Policy Governance Suite	Incident Response Tabletop
Deliverable 2	Risk Assessment Matrix	MFA & MDM Enforcement	Pre-Audit Readiness Report
Deliverable 3	Compliance Roadmap	Vendor Management Workflow	Monthly Security Scorecard
Outcome	Clarity on Risk	Operational Control	Audit Readiness /

			Cert.

---

4. Packaging the Offers: Fixed Scope, Fixed Price

To avoid the "hourly trap," every service must be packaged. We will detail the three core products that make up the $100k roadmap.

4.1 Product 1: The vCISO Subscription (The Core MRR)

The vCISO service is often vague. Sevlex will productize it by defining exactly what is included in the monthly fee, and crucially, what is *not*.

The "Silver" Tier (Compliance Guard) - $3,500/mo

- **Ideal For:** Seed-stage startups needing to maintain a SOC 2 report.
- **Scope:**
  - Monthly automated vulnerability scan (external only).
  - Review of compliance platform (Drata/Vanta) to ensure no controls are failing.
  - Answering up to 2 Vendor Security Questionnaires per month.
  - Annual policy review.
- **Constraint:** No meetings. All communication via Slack/Email or async video updates. This allows high volume.[13]

The "Gold" Tier (Growth Partner) - $6,500/mo

- **Ideal For:** Series B companies scaling headcount and sales.
- **Scope:**
  - All Silver features.
  - Monthly 1-hour Strategy Sync with leadership.
  - Up to 5 Vendor Security Questionnaires per month.
  - Vendor Risk Management (assessing up to 5 new vendors/mo).
  - Quarterly Penetration Test (Lightweight).
- **Constraint:** 48-hour SLA on questionnaires.

The "Platinum" Tier (Enterprise Strategic) - $12,000/mo

- **Ideal For:** FinTech, HealthTech, or Pre-IPO.
- **Scope:**
  - Bi-weekly strategy meetings.
  - Attendance at Board Meetings (quarterly) to present security posture.
  - Unlimited Questionnaire support (Priority SLA).
  - Full Incident Response Retainer (24/7 access).
- **Value:** This replaces a $250k headcount for $144k/year.[7]

4.2 Product 2: The SOC 2 Accelerator (The Wedge)

This is the entry point for most clients. It is a high-intensity, 8-week sprint.

- **Price:** $15,000 (One-time).
- **Promise:** "From Zero to Audit-Ready in 60 Days."
- **Mechanism:** A cohort-based or structured 1:1 program following the SecureScale Framework.
- **Leverage:** The content (policies, templates) is created once and sold many times. The "work" is guiding the client to click the buttons, not writing policies from scratch.[18]

4.3 Product 3: Transparent Penetration Testing

Penetration testing is often sold with opaque pricing ("Call for a quote"). Sevlex will disrupt this with menu pricing to filter for qualified leads.[22]

- **Package A: The "Tick-the-Box" (Network Only) - $3,500**
  - Automated scan + manual verification of false positives.
  - Executive Summary Report.
  - Pass/Fail letter for auditors.
- **Package B: The "SaaS Standard" (Web App) - $5,500**
  - Testing of 1 web application (up to 2 roles).
  - OWASP Top 10 focus.
  - 1 Round of Retesting included.
- **Package C: The "Deep Dive" (Web + API) - $9,000+**
  - Full manual testing of App and API.
  - Business logic testing.
  - Detailed remediation walkthrough with engineering team.

---

5. Systemizing Delivery: The "Service Factory"

To scale, the delivery must be executed by systems and junior staff, not the founder.

5.1 The Tech Stack for Scale

A productized service relies on a specific stack to automate low-value tasks.[3]

- **PSA (Professional Services Automation): HaloPSA** or **ConnectWise**. This is the central nervous system. It manages tickets, billing, and time tracking. Every "Product" in the sales catalog maps to a "Project Template" in the PSA.
- **Compliance Automation: Vanta** or **Drata**. Sevlex must partner with these platforms. They automate the evidence collection (e.g., checking if screensavers are locked), reducing the vCISO workload by 70% compared to manual screenshots.[24]
- **Reporting: PlexTrac**. This tool ingests data from scanners (Nessus, Burp Suite) and

compliance tools to auto-generate the "Monthly Security Report." This saves hours of formatting Word docs.[25]
- **Project Management: ClickUp**. Used for the client-facing view of the roadmap.

5.2 The "Master Intake" Strategy

As Hickman suggests, "Start with what you repeat most often" [Image 7]. The intake process is the biggest bottleneck.

- **Solution:** A comprehensive digital intake form (JotForm/Typeform) sent immediately upon contract signature.
- **Data Collected:** Cloud Account IDs (AWS/Azure), GitHub Org names, HRIS system details, list of key vendors, and admin email addresses.
- **Automation:** When the form is submitted, a Zapier workflow triggers:
  1. Creates the client in HaloPSA.
  2. Creates the shared Slack channel.
  3. Populates the ClickUp project board with the "SecureScale" template tasks.
  4. Invites the client to the Vanta/Drata instance.[26]

5.3 Building the Delivery Team

To hit $100k/month with healthy margins (50%+), the labor mix is critical.

- **The Founder (You):** Focuses on Sales, Marketing, and "Platinum" client strategy.
- **The Lead vCISO (US/UK based):** Hired at ~$120k/year (or contractor) once MRR hits $40k. Handles the "Gold" client meetings and strategy.
- **The SOC Analyst (Offshore/Nearshore):** Hired at ~$30k-$50k/year. Handles the "Grunt work"—log reviews, answering standard questionnaires (using an AI library), running vulnerability scans, and preparing reports for the vCISO to present.[28]
- **The Pen Tester (Contractor):** Paid per engagement (e.g., 40% of the project fee). This keeps costs variable until volume justifies a full-time hire.

Table 5.1: The "Factory" Workflow

Step	Action	Owner	Tool
1. Trigger	Client signs proposal	Sales	PandaDoc
2. Intake	Client fills technical intake form	Client	JotForm
3. Setup	Auto-provisioning	Automation	Zapier/ClickUp

	of project & tools		
4. Assess	Automated agents scan environment	Analyst	Vanta/Drata
5. Report	Analyst compiles "Gap Report"	Analyst	PlexTrac
6. Strategy	Kickoff call to review Roadmap	vCISO	Zoom
7. Execute	Weekly sprints to close gaps	Client/Analyst	ClickUp
8. Maintain	Monthly "Green Status" check	Analyst	HaloPSA

---

6. The Sales Engine: From "Convincing" to "Consulting"

6.1 The Consultation Engine

Traditional sales involves "pitching." Productized sales involves "diagnosing." Sevlex will implement a two-step sales process [Image 9].

Step 1: The Discovery Fit Call (15 Minutes)

- **Goal:** Disqualify non-fits. Screen for intent and budget.
- **Script:** "My goal today is to see if our Accelerator is the right fit for your timeline. I have three questions. 1) What is the specific business event driving this need (e.g., a stalled deal)? 2) What is your target deadline for being audit-ready? 3) Do you have a budget allocated for compliance infrastructure?".[29]
- **Outcome:** If fit, book the Strategy Call. If not, send them to the "Group Coaching" or content resources.

Step 2: The Strategy Consultation (45 Minutes)

- **Framework:** "Where are you now? Where do you want to go? How does the SecureScale framework get you there?" [Image 9].
- **The "Gap" Technique:** Show them their current "Score" (from the intake or public scan) compared to the "Enterprise Ready" score. The gap creates the tension that leads to the sale.

- **The Close:** "Based on your timeline, the 8-Week Accelerator is the only way to unblock that deal by Q3. It costs $15k. Would you like to reserve a slot for the next cohort?"

6.2 The Video Sales Letter (VSSL)

To automate the "pitch," Sevlex will create a VSSL placed on the landing page and sent to prospects before the call.

- **Structure:**
  - **Problem:** "SaaS founders are losing 30% of enterprise deals because they fail security reviews."
  - **Possibility:** "Imagine if your security posture was a sales asset, not a liability."
  - **Path:** "We use the SecureScale framework to get you audit-ready in 8 weeks, guaranteed."
  - **Proof:** "Here is how we helped Company X close a Series B."
  - **Pitch:** "Book a Strategy Call to see your Gap Analysis.".[31]

6.3 Handling the "Too Expensive" Objection

In the SMB/SaaS market, price sensitivity is common.

- **Reframe:** Pivot from "Cost" to "ROI."
- **Script:** "I understand $3,500/month sounds like a lot. However, a single enterprise deal lost is likely worth $50k+. If this service helps you close just *one* extra deal this year, it pays for itself. Also, compare this to the cost of a full-time security engineer at $150k/year. You are getting an entire department for the price of an intern.".[32]

---

7. Marketing Funnels: Generating the Leads

7.1 The "Scorecard" Marketing Funnel

Cold calling is hard. Inbound is better. The most effective lead magnet for this domain is a **"SaaS Security Maturity Scorecard"**.[34]

- **Mechanism:** A 20-question quiz on the Sevlex website (using ScoreApp).
  - *Q: Do you have MFA enforced on all company email accounts?*
  - *Q: Do you have a formal process for offboarding employees?*
  - *Q: When was your last penetration test?*
- **Value:** The user gets an immediate, personalized PDF report giving them a "Security Maturity Score" (e.g., "Critical Risk: 42/100") and a list of 5 urgent fixes.
- **Conversion:** The "Thank You" page says: "Your score indicates high risk. Book a free 15-minute review of this report with a vCISO."
- **Traffic:** Drive traffic to this quiz via LinkedIn ads and organic posts ("What's your Security Score? Take the quiz.").

7.2 The "Video Audit" Cold Outreach

For high-value targets, use hyper-personalized outreach.

- **Tactic:** Use a tool like Loom to record a 3-minute video analyzing the prospect's *public* security posture (DMARC records, website headers, privacy policy).
- **Script:** "Hey [Founder], I'm [Name] from Sevlex. I'm not selling anything, but I noticed your DMARC record is missing, which means your sales emails might be hitting spam. I made this 2-minute video showing you exactly how to fix it. Hope it helps."
- **Psychology:** This delivers "Results in Advance" and triggers reciprocity.[35]

7.3 Channel Partnerships: The MSP Multiplier

Managed Service Providers (MSPs) manage IT for thousands of SMBs but often lack high-end security compliance capabilities. They are the perfect channel partner.[36]

- **The Offer:** "White Label" vCISO services.
- **Pitch to MSP:** "You handle the tickets; we handle the compliance. We don't touch the endpoints, so we don't compete with you. We help you retain your clients by offering them the compliance they are asking for. You mark up our services by 20%."
- **Economics:** One MSP partner can bring 10-20 clients. Securing 3 solid MSP partners can virtually guarantee hitting the $100k/mo goal.[37]

---

8. Scaling Mechanics: The "One-to-Many" Evolution

8.1 From 1:1 to Group Coaching

Once Sevlex has refined the SOC 2 process with 10-20 clients, it can launch a **"Group Bootcamp."**

- **Structure:** A quarterly cohort where 10 startups join at once.
- **Delivery:** Weekly group Zoom calls (training + Q&A) rather than 1:1 consulting.
- **Price:** $5,000/company (vs. $15,000 for 1:1).
- **Result:** $50,000 in revenue for the same amount of founder time as one project. This is the ultimate leverage for hitting high revenue figures.

8.2 The "Alumni" Membership

After a client passes their SOC 2 audit, they often churn. To prevent this, convert them into the "Silver" maintenance tier.

- **Proposition:** "You passed the audit, but you have to stay compliant for next year. For $1,500/mo, we will keep your Vanta/Drata green and handle your monthly vulnerability scans so you don't fail next year."
- **Effect:** This builds a long-tail of high-margin, low-touch revenue.[2]

---

9. Implementation Roadmap: 0 to $100k

Phase 1: The Build (Months 1-3)

- **Goal:** $10k MRR.
- **Focus:** Validation and Case Studies.
- **Action Items:**
  - Build the "SecureScale" framework assets (Policy templates, Roadmap deck).
  - Launch the "Scorecard" funnel.
  - Secure the first 3 "Beta" clients at a discount in exchange for detailed testimonials.
  - Founder does 100% of the delivery to refine the process.

Phase 2: The Systemize (Months 4-6)

- **Goal:** $40k MRR.
- **Focus:** Delegation and Automation.
- **Action Items:**
  - Implement HaloPSA and Vanta/Drata partnerships.
  - Hire the first full-time Analyst (Delivery) to offload the "Assemble" phase.
  - Formalize the "vCISO" packages and put pricing on the website.
  - Start the "Video Audit" outbound campaign.

Phase 3: The Scale (Months 7-12)

- **Goal:** $100k MRR.
- **Focus:** Sales and Partnerships.
- **Action Items:**
  - Sign 3 MSP Channel Partners.
  - Launch the "Group Bootcamp" for smaller startups.
  - Hire a dedicated Sales Rep/Account Executive.
  - Founder moves to "Chairman" role, focusing only on brand and strategic partnerships.

---

10. Conclusion

The path to $100k/month for Sevlex is not paved with more hours worked, but with more constraints applied. By productizing the vCISO and SOC 2 offerings, Sevlex transforms from a commodity service provider into a strategic growth partner for SaaS founders. The shift from "hourly billing" to "value-based pricing" captures the true worth of the expertise, while the "SecureScale" framework ensures that this value can be delivered consistently, efficiently, and independently of the founder’s time. The market for compliance-driven security is exploding;

Sevlex, armed with this blueprint, is perfectly positioned to capture it.

Title: Strategic Blueprint: Scaling Sevlex to $100k MRR via Productized Cybersecurity Services

1. The Productization Imperative: Moving Beyond Hourly Billing

1.1 The Trap of the Hourly Model

Most cybersecurity firms operate as traditional consultancies, selling expertise by the hour. While this model can generate initial revenue, it creates an inherent "glass ceiling" on growth.

- **Revenue Cap:** Revenue is linearly tied to time. To increase revenue, the firm must linearly increase headcount, which introduces management complexity and erodes margins.
- **Sales Friction:** Every proposal is unique. Scoping takes days. Clients hesitate because the final cost is uncertain ("How many hours will this *really* take?").
- **Operational Chaos:** "Scope creep" is rampant. Without defined boundaries, clients treat consultants as "catch-all" IT support, diluting profitability.[1]

For Sevlex to reach $100,000/month, it must break the link between time and money.

1.2 The Productized Service Solution

Productization involves packaging services with a defined scope, fixed price, and standardized delivery timeline. It transforms an intangible service into a tangible product on a shelf.

- **Predictability:** Clients know exactly what they get and what it costs.
- **Scalability:** Delivery can be systematized (SOPs) and delegated to lower-cost resources.
- **Recurring Revenue:** Services are structured as subscriptions (MRR) rather than one-off projects.[3]

Sevlex Product Philosophy:
"We do not sell hours; we sell outcomes. We sell 'Audit Readiness,' 'Continuous Compliance,' and 'Threat Visibility.'"

1.3 Financial Modeling: The Road to $100k MRR

Reaching $100,000 per month requires a calculated mix of high-ticket non-recurring engineering (NRE) projects and stable monthly recurring revenue (MRR). The analysis

suggests a **"Barbell Strategy"**:

1. **High-Volume, Low-Touch:** Productized vulnerability scanning and basic compliance monitoring (The "Silver" Tier).
2. **Mid-Volume, Mid-Touch:** Monthly vCISO retainers (The "Gold" Tier).
3. **Low-Volume, High-Ticket:** SOC 2 Accelerators and comprehensive Penetration Tests.

Table 1.3: Revenue Mix Scenario for $100k/Month

Revenue Stream	Product	Unit Price	Clients Needed	Monthly Revenue
Recurring (MRR)	**vCISO Gold**	$6,500 / mo	8 Clients	$52,000
Recurring (MRR)	**vCISO Silver**	$3,500 / mo	5 Clients	$17,500
One-Time (NRE)	**SOC 2 Bootcamp**	$15,000 / project	1 Client	$15,000
One-Time (NRE)	**Pentest Packages**	$5,000 avg	3 Tests	$15,500
Total			**~17 Clients**	**$100,000**

This model demonstrates that Sevlex needs fewer than 20 active clients to hit the target, emphasizing the importance of high-value positioning over volume.[6]

---

2. Defining the Avatar and the Result

2.1 The Avatar: B2B SaaS Founders

The analysis indicates that specializing in **B2B SaaS Startups (Series A/B)** offers the highest growth velocity.

- **Pain Point:** They *cannot* close enterprise deals without SOC 2 compliance. Security is a revenue blocker.
- **Psychology:** They view security as an investment in sales, not just an insurance policy against hackers.
- **Environment:** Homogeneous tech stacks (AWS, GitHub, Slack, G-Suite) allow for highly

standardized service delivery.[5]

The Avatar Statement:
"I help achieve so they can." [Image 1].

2.2 The "Result": Revenue Enablement

Sevlex must position itself as a "Revenue Enablement" partner.

- **Old Way:** "We provide cybersecurity consulting." (Boring, Cost Center).
- **Sevlex Way:** "We unblock your sales pipeline by getting you SOC 2 ready in 8 weeks." (Exciting, Profit Center).[10]

---

3. The Signature Framework: "SecureScale"

To productize, Sevlex needs a proprietary framework that explains "how it works". We will call this the **SecureScale Framework**.

Table 3.1: The SecureScale Methodology

Phase	1. Gather (Assess)	2. Assemble (Remediate)	3. Launch (Maintain)
Focus	Visibility & Gaps	Implementation & Engineering	Validation & Operations
Action 1	Automated Asset Inventory	Policy Stack Deployment	Incident Response Tabletop
Action 2	Risk Assessment Workshop	Technical Controls (MFA/MDM)	Pre-Audit Mock Assessment
Action 3	Compliance Roadmap	Vendor Risk Integration	Go-Live / Audit Handoff
Tools	Drata/Vanta Agents	Sevlex Policy Templates	Pen Test / Audit Firm

This framework allows Sevlex to sell a "Process," not a "Person." It builds confidence that there is a plan [Image 4].

---

4. Packaging the Offers: The "Big Three" Products

4.1 Product 1: The vCISO Subscription (MRR Engine)

The vCISO service replaces a full-time hire. It must be strictly scoped to protect margins [Image 10].

The "Silver" Tier (Compliance Guard) - $3,500/mo

- **Ideal For:** Seed-stage startups needing to maintain a SOC 2 report.
- **Scope:** Monthly vulnerability scan (external), Compliance platform review (Drata/Vanta), 2 Vendor Questionnaires/mo, Annual policy review.
- **Constraint:** Async communication only (Slack/Email). No meetings.[13]

The "Gold" Tier (Growth Partner) - $6,500/mo

- **Ideal For:** Scaling SaaS companies.
- **Scope:** All Silver features + Monthly Strategy Sync (1 hr), 5 Vendor Questionnaires/mo, Vendor Risk Management (5 vendors/mo), Quarterly Lightweight Pentest.
- **Constraint:** 48-hour SLA on questionnaires.

The "Platinum" Tier (Enterprise Strategic) - $12,000/mo

- **Ideal For:** Regulated industries (FinTech).
- **Scope:** Bi-weekly strategy meetings, Board Meeting attendance (quarterly), Unlimited Questionnaire support, 24/7 Incident Response Retainer.
- **Value:** Replaces a $250k CISO for $144k/year.[7]

4.2 Product 2: The SOC 2 Accelerator (The Wedge)

- **Price:** $15,000 (One-time).
- **Promise:** "Audit-Ready in 8 Weeks."
- **Deliverables:** Full implementation of the SecureScale Framework (Phases 1 & 2). Includes all policy writing, risk assessments, and tool configuration guidance.[18]

4.3 Product 3: Transparent Penetration Testing

- **Package A (Network):** $3,500. External perimeter scan & report.
- **Package B (Web App Standard):** $5,500. OWASP Top 10, 1 role.
- **Package C (Web App Advanced):** $9,000+. API testing, business logic, re-testing included.[22]

---

5. Systemizing Delivery: The "Service Factory"

5.1 The Tech Stack for Scale

- **PSA (Professional Services Automation): HaloPSA** or **ConnectWise**. Centralizes tickets, billing, and project management.
- **Compliance Automation: Vanta** or **Drata**. Automates 80% of evidence collection (e.g., checking if screensavers are locked), reducing vCISO workload.[24]
- **Reporting: PlexTrac**. Aggregates data from scanners (Nessus, Burp Suite) to auto-generate reports. Cuts reporting time by 50%.[25]
- **Project Management: ClickUp**. Client-facing roadmap views.

5.2 Standard Operating Procedures (SOPs)

- **The Master Intake Form:** A JotForm sent automatically upon contract sign. Collects AWS IDs, GitHub Org names, and HRIS info *before* the kickoff call.[26]
- **The "Gap Analysis" SOP:** A standardized checklist used in Month 1 to score the client against NIST CSF or SOC 2 controls.[39]
- **Offshore Leverage:** Hire offshore analysts (SOC Analysts) to handle log reviews, vulnerability scan validation, and basic questionnaire responses. This arbitrage supports the high margins.[28]

---

6. The Sales Engine

6.1 The Consultation Process

Sevlex will use a two-step diagnostic sales process [Image 9].

Step 1: The Discovery Fit Call (15 Mins)

- **Goal:** Disqualify non-fits.
- **Script:** "My goal is to see if we can help you hit your audit deadline. 1) What is the business event driving this need (e.g., a stalled deal)? 2) What is your timeline? 3) Do you have a budget allocated for compliance?".[29]

Step 2: The Strategy Consultation (45 Mins)

- **Framework:** "Current State vs. Desired State."
- **The Gap:** Show them their "Security Score" from the initial scan.
- **The Close:** "Based on your goal to close the Coca-Cola deal by Q3, the 8-Week Accelerator is the best fit. It's $15k. Shall we secure your spot?".[30]

6.2 Handling Objections

- **"Too Expensive":** "Compared to what? A full-time CISO is $18k/mo. A data breach is $150k. If this unblocks one $50k deal, it pays for itself immediately.".[32]
- **"We have IT":** "IT keeps systems running. We keep them secure and compliant. We handle the audit work so your IT team can focus on tickets.".[33]

6.3 Video Sales Letter (VSSL)

- **Structure:** Problem (Lost deals due to security) -> Possibility (Security as a sales asset) -> Path (SecureScale Framework) -> Proof (Case Study) -> Pitch (Book Strategy Call).

---

7. Marketing Funnels & Lead Gen

7.1 The "Scorecard" Funnel

- **Lead Magnet:** "The SaaS Security Maturity Scorecard" (Quiz).
- **Mechanism:** 20 questions about their security posture.
- **Value:** Instant PDF report with a "Risk Score" and 5 urgent fixes.
- **CTA:** "Book a review of your score with a vCISO".[34]

7.2 Cold Outreach: The "Video Audit"

- **Tactic:** Record a 2-min Loom video analyzing a prospect's public security posture (DMARC, privacy policy).
- **Script:** "Hey [Founder], I noticed your DMARC record is missing, which hurts your email deliverability. Here's a quick video on how to fix it. No strings.".[35]

7.3 Channel Partnerships (MSPs)

- **Strategy:** Partner with Managed Service Providers who manage IT but lack security expertise.
- **Offer:** White-label vCISO services. The MSP resells Sevlex to their clients at a markup. One MSP can bring 10-20 clients.[36]

---

8. Scaling: One-to-Many

8.1 Group Coaching (Bootcamp)

- **Concept:** A cohort-based SOC 2 program for early-stage startups who can't afford $15k.
- **Model:** 10 companies pay $5k each. Weekly group Zoom calls for 8 weeks.
- **Leverage:** $50k revenue for the same founder time as one 1:1 project [Image 8].

8.2 The "Alumni" Membership

- **Concept:** Convert SOC 2 project clients into long-term "Silver" maintenance clients ($1,500 - $3,500/mo) to ensure they pass their audit renewal next year.[2]

---

9. Implementation Roadmap

Phase 1: Foundation (Months 1-3)

- **Goal:** $10k MRR.
- **Actions:** Define packages. Build Scorecard funnel. Secure 3 Beta clients.

Phase 2: Systemization (Months 4-6)

- **Goal:** $40k MRR.
- **Actions:** Implement HaloPSA/Drata. Hire first Analyst. Launch MSP partnership program.

Phase 3: Scaling (Months 7-12)

- **Goal:** $100k MRR.
- **Actions:** Double down on MSPs. Launch Paid Ads to Scorecard. Hire Sales Rep.

---

10. Conclusion

Sevlex will reach $100k/month by transforming from a generalist consultancy into a specialized productized agency. By focusing on the B2B SaaS vertical, packaging services into the "SecureScale" framework, and leveraging the vCISO model for recurring revenue, Sevlex aligns its growth with the success of its clients. The shift is from selling "hours of security" to selling "revenue enablement." With this blueprint, the path to $1.2M ARR is clear, structured, and scalable.
